

Multi-Platform Trusted Copy Software

Download and Installation Instructions for Mac OS X

Before you can proceed with a MPTC download, you must submit the Conditions of Use form from the Multi-Platform Trusted Copy Software Distribution Site. You will receive a confirmation of eligibility and a file, `MptcKey.ser`.

If MS Office files will be reviewed on this system, MS Office 2004 for Mac with Service Pack 1 and Update 11.1.1 should be installed. See the following for information on the service packs:

- Description of the Microsoft Office 2004 for Mac Service Pack 1 (11.1.0); Article ID: 883951, <http://support.microsoft.com/default.aspx?scid=kb;en-us;883951>
- Microsoft Office 2004 for Mac 11.1.1 Update - Available at Mactopia.com in the downloads area:
http://www.microsoft.com/mac/downloads.aspx?pid=download&location=/mac/download/office2004/update_11.1.1.xml&secid=4&ssid=14&flgnosysreq=True

MPTC will NOT review MS Office files on computers using MS Office X for Mac.

Downloading and Installing MPTC Software

Obtain the Three Required Files

1. Save the `MptcKey.ser` file.

Put the `MptcKey.ser` file (which you received in the eligibility email as a result of submitting the Conditions of Use form) on the computer upon which you will be installing MPTC. We recommend putting this file on the Desktop.

2. Download and Install the MPTC Decryption Tool Setup image.

Right-click or Control-click on `MptcDecryptionToolMacSetup.dmg`. Depending on your browser, choose Save Link Target As.... or Download Linked File. Save the file to your Desktop and close the download window. An icon will appear on the Desktop showing that `MptcDecryptionToolMacSetup.dmg` is mounted.

Double-click on the `MptcDecryptionToolMacSetup.dmg` icon. The DecryptionTool20 window will open and a DecryptionTool20 download icon will appear on the Desktop. In the window, follow the instructions to drag the `MptcDecryptionTool` icon into your Applications folder. This action installs the Decryption Tool. **Note:** you must have Administrator privileges to add to the Applications folder. If you do not, drag this file to your home directory (Users/userhome/).

On the Desktop, drag the `MptcDecryptionToolMacSetup.dmg` icon to the trash.

3. Download the MPTC Encrypted Setup file.

From the MPTC Website, right-click or Control-click on `MptcMacSetup.enc`. Depending on your browser, choose Save Link Target As... or Download Linked File. Save the file to the Desktop and close the download window.

Note: The `MptcMacSetup.enc` file contains the encrypted disk image used to install MPTC. It is used as input for the MPTC Decryption Tool.

Run the MPTC Decryption Tool

4. Double-click on the `MptcDecryptionTool` in the Applications (or Users/userhome/) folder to launch it.
5. Following the directions on the Graphic User Interface (GUI), browse to the Desktop and select the `.enc` and `.ser` files.
6. Click on the Decrypt button.

Please be patient; depending on your system, the decryption process can be lengthy.

The name and location of the decrypted **output** file, `MptcMacSetup.dmg`, will fill the previously blank “Decrypted file written to” field when the decryption is complete. (The decrypted image file `MptcMacSetup.dmg` is written to the same location as the encrypted **input** file, `MptcMacSetup.enc`.)

Install MPTC

7. Select the “Mount `MptcMacSetup.dmg` file” button. Wait. (Depending on your system configuration, this could take several seconds to a minute.) The `Mptc60` download icon will appear on your Desktop, and the `Mptc60` download window will display. Follow the instructions to drag the `Mptc60` folder displayed in the window to the Applications directory on your hard drive. The Applications directory is the recommended location, though you may drag this folder to any location you wish. Click Finish to close the MPTC Decryption Tool window.
8. The `Mptc60` folder contains the MPTC application and all included documentation. Double-click the folder and then the MPTC application to run MPTC. You can also drag the application icon to the Dock for simple access in the future.
9. You can now delete `MptcMacSetup.dmg` and `MptcMacSetup.enc` from the Desktop. Right-click or Control-click to send these files to the trash. You can delete the `MptcDecryptionTool` from the Applications (or Users/userhome/) folder or keep it in case you need to reinstall MPTC. Keep the `MptcKey.ser` file for the same reason.

Run MPTC

To run MPTC, simply double-click on the MPTC application file where MPTC was installed.

Uninstalling MPTC

1. From the Finder, navigate to the directory where the MPTC software was installed.
2. Drag the Mptc60 folder to the trash.

Note: After dragging the Mptc60 directory to the trash, check the Mptc folder/directory for files that must be removed manually. Leave the cleansed and logfile folders that are in your <userhome>/Mptc folder/directory, as they have your previously reviewed files and logs. You may remove the MPTCConfig file if you do not have custom settings you want to keep for another MPTC installation. You can delete any remaining files.
